

NOTICE

The Telecommunications Regulatory Authority (TRA) would like to draw the kind attention of all users of the services of Internet service providers (ISPs) that some updates will be made to the DNS servers on October 11, 2018. This is globally planned by the Internet Corporation for Assigned Names and Numbers (ICANN), an International organization that is globally dedicated to keeping the Internet environment secure and stable.

Due to these updates some Internet services might be affected, hence the TRA has been coordinating with ISPs to make sure, that their systems can handle the automated update process and to stress the need to observe the ICANN procedures on this matter. In cases where the users have difficulty accessing the Internet or websites, they are advised to contact their service provider.
